Connected Hospitality

STANLEY Smart Key - Intelligent Thinking

STANLEY Smart Key is a retro fit solution which can be tailor-fitted to suit customer requirements in hotel environments.

FOR THOSE WHO MAKE THE WORLD CONNECTED

STANLEY®

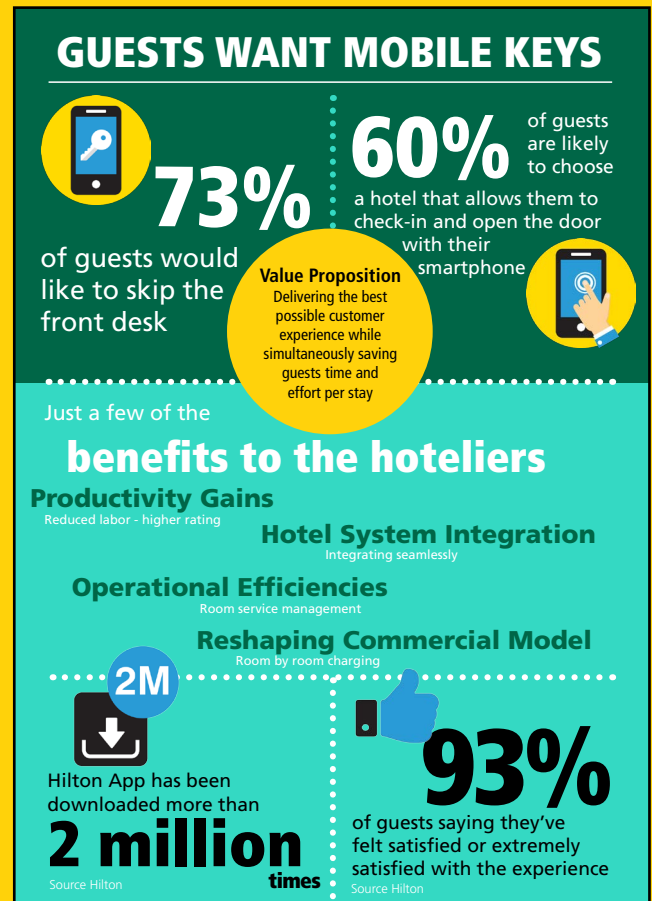

SMART KEY™

STANLEY Smart Key™ allows guests around the globe to experience the benefits of a Stanley Black & Decker digital innovation technology, by maximising operational efficiencies, guest loyalty, flexibility and convenience.

STANLEY Smart Key Empower your staff and connect with your guests STANLEY Smart Key lock adapter is used to transform traditional door locks into smartphone operated locks. The smartphone connects the locks to the Key Cloud. In case you want to control or operate the lock using remote access, the lock must be connected to the Internet in a secure way. This makes it possible to operate and control the lock remotely.

Most hotels still use magnetic cards for opening doors. The magnetic cards are easily damaged and get lost and it takes a lot of time to manage them. If, for instance, a housekeeping person loses a card, the worst scenario is that an alteration must be made to each door's card reader.

By using the STANLEY Smart lock adapters and the gateway, hotels can manage their doors in a centralised manner. If necessary, the software of all the doors can be updated simultaneously.

With this solution it is possible for a chain of hotels to manage even all the locks of all its hotel rooms centrally from one location.

How it Works

Mobile access will give guests an experience that is flexible, convenient and secure. This means that entering a secured room can be as simple as touching a card to the sensor, flashing one's phone in front of the lock, or even just approaching the hotel room. No more struggling to insert a key card in the proper direction or swipe with just the right amount of finesse. The key factor responsible for making this technology easier to implement is the fact that more and more devices are getting compatible.
