STANLEY Smart Assets

Building digitisation

PERFORMANCE IN ACTION™

STANLEY[®]

Security

STANLEY Smart Assets provides a single view of all assets in multiple locations in real-time.

STANLEY Smart Assets is a platform that can manage and provide actionable data, so if an asset fails or requires maintenance, the right engineer can be sent to the right location with the correct part every time.

This technology can help to drive building digitisation, which creates significant time savings and with asset performance data that can be analysed to help reduce procurement costs and improve your bottom line.

With STANLEY Smart Assets know at all times what assets you have, where they are located, and in what condition they are in.

STANLEY Smart Assets uses the IoT technology to create a digital building.

Currently 86% of building maintenance is reactive. And the engineers who look after the building spend time locating equipment and finding out the most basic information about the asset before a repair can take place.

How does STANLEY Smart Assets work?

STANLEY Smart Assets is a platform that allows businesses to centralise data about any type of equipment into a visual, web application that displays the location, health and contextual information about every asset.

STANLEY Smart Assets also allows the integration of other STANLEY Smart Products to provide a bespoke cause and effect alerts engine.

How will it work tomorrow?

Data Visualisation

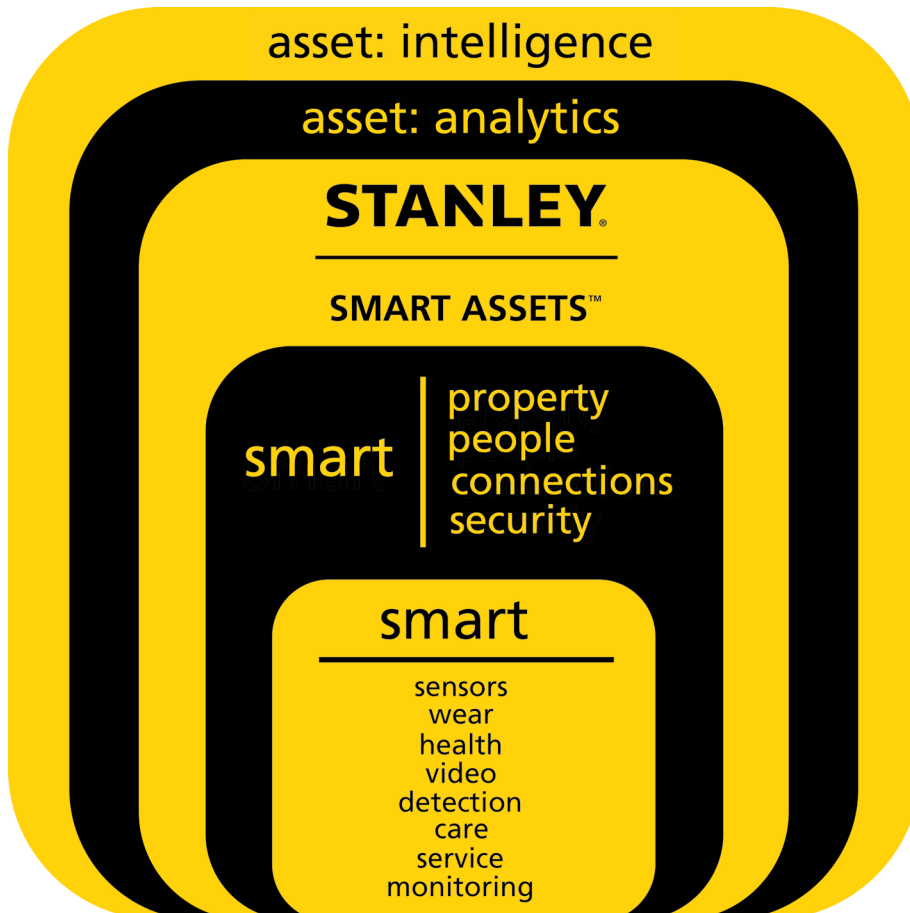

See all of your equipment on a digital map to improve asset management services

Contextual Data

Combine live data feeds from STANLEY Smart Products and apply the appropriate action

Real Time Monitoring

Real time data from Smart Products can be combined to trigger alarms and events which Stanley will manage as a service
